

Rock'Em Sock'Em

An Immersive Mixed-Reality
Experience Game

This presents an interactive game of Rock'Em Sock'em.

Concept

- User gets to experience an immersive game of Rock'em Sock'em up close.
- They can play online, locally, co-op, and even customize their fighter to their own desires.
- Users can play in the same space or anywhere in the world.
- Games can last in just minutes or as long as the user wants to play.
- Anyone can play!

Customer Journey

Customer Journey

- User puts on their Apple Vision Pro and selects the Rock'em Sock'em application.

Customer Journey

- User is presented the main menu where AR objects are in the user's space. User can select Local Play, Online, Co-Op Play, and Customization.

Customer Journey

- User moves to an available space in the room and their player and stage is built while the game searches for an opponent.

Customer Journey

- After the opponent is found, their character is being built as the display above shows the opponent's stats such as win rates.

Customer Journey

- The match begins and the user's fight it out!

Customer Journey

- Whomever wins, a spotlight appears over the winner and crowns both the player and their avatar.

Customer Journey

- When returning to the main menu, user can open the customizer and the two robots in the front show the user's selections of shirts, gloves, and hats.

Customer Journey

- Users don't have to be far away for a 1:1 ratio match. Even user's playing next to each other can participate. The ring has dynamic scaling to the user's space so your reflexes can be big or small.

Customer Journey

- The user can also play the game sitting down with another user in the miniature scale.

Interaction Example

Customer Journey

- During the game, the handles would beep much like a heart rate and the faster the beat, the closer to game over.

Customer Journey

- At the game over, the handles present a steady line, indicating the match is over.

Customer Journey

- Since the user is punching like the game, the controllers cannot be too far apart, or the recognition would be disconnected. For this, an ERROR message appears to realign your body and reconnect the handles.

Customer Journey

Left shows proper way

Right shows improper way

User holds hands close to themselves like the style of the game.

Customer Journey

- The game will be in the same style as the toy itself. The models on the left are iteration-1 without much detail.
- For the up-close games without much space, the user would be experiencing the scaled down model.

Take them
out →

Customer Journey

- For 1:1 scale games, the user would be placed where the controllers would be. The platform would expand so the user's space is included in the experience.
